

Dignified Farkle Coders

Meet the Team

James Larivee: Project leader in Android and Server development

Robert Long: Ui Designer and assistant Android developer

Tyla Armstrong-Williams: Assistant Server developer and documentation

What Is Farkle?

Farkle is a Game of risk and reward. Players roll up to six dice to earn points, every time you decide to roll the dice you must score points. If you don't score any points on a given roll, you forfeit all the points you had gained in that turn. For our farkle app, our goal was to allow up to

four people join a game, and play against each other, competing to win first place and be awarded with victory points that could be spent on customizing the player's dice.

Why Farkle?

The three of us wanted to develop a multiplayer game on the android platform. We figured that building a dice game would be a fun challenge to attempt. We decided to create a Farkle simulator because most people seemed to be unfamiliar with it. We wanted to create an app to introduce more people to Farkle, and our goal is to eventually release it to the GooglePlayStore.

Intended Users

- People who enjoy dice games that require more than one player.
- People who enjoy the thrill of risk and reward games.
- People looking for a game to play with far away friends.
